Microarray Data FAQ

How long does it take to get my Microarray data after I submit my RNA? If the RNA is submitted according to our sample submission guidelines, normal turn around on a typical project is 10 business days or less.

After the Core runs the microarrays, what will I get back for data? Once the microarray data is generated, we send it to a compressed, zipped folder. It is then uploaded to a secure Microarray Server and a direct link (with instructions for access) is emailed to the investigator where they can retrieve the data through a password protected mechanism. Data will be sent to the supporting Bioinformatics Core as requested.
